

SEMI-INTEGRATED SOLUTIONS

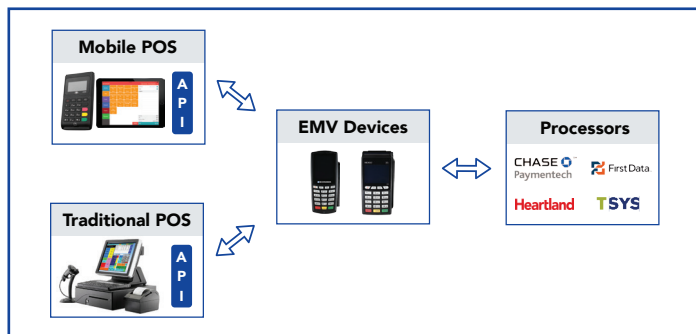

Cost-Effective Compliance for Your Existing POS Payment Solutions

NEXGO's semi-integrated solutions are PCI compliant payment solutions for your existing point-of-sale system. Our solutions allow you to keep your payment information transmission from retail POS software separate from your other systems—with no integration fees and no additional certifications needed for compliance. From pay at the table to the delivery of goods and services, NEXGO's semi-integrated solutions give you the freedom to do business the way business is done today, anywhere and anyway you want.

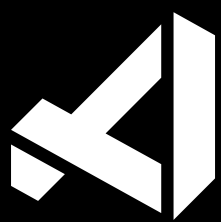

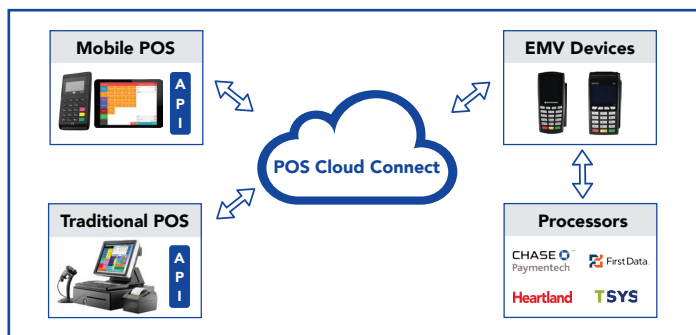

Connect your point-of-sale system with your POS hardware terminals and keep your PCI/PADSS compliance without the time and expense associated with investing in a fully-integrated hardware solution.

LESS Development | **REDUCED PCI Scope** | **QUICKER Time to Market**

POS Simple Connect Solution

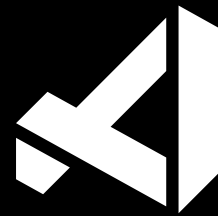

POS Cloud Connect Solution

SEMI-INTEGRATED

SEMI-INTEGRATED

NEXGO's Semi-Integrated Solutions Can:

- Exclude your POS application from PCI/PADSS scope because the data never touches it
- Remove Electronic Cash Register, SaaS application, or Web Browser out of the PCI nightmare once and for all, eliminating headaches due to security risks, viruses, keyboard loggers, security updates, and other complex issues
- Work with existing software and NEXGO EMV Certifications to add Semi-Integrated Mobile and POS connectivity

POS Cloud Connect Solution Can Also:

- Facilitate communication to both the terminal at checkout, payment processor, and the secure cloud connector with no additional cables, integrations or downloads
- Differentiate your business from competitors while scaling business operations and offering various payment options across multiple locations in a cost-effective way
- Provide the ability to layout and track all of your merchants, locations and terminals through a single hierarchy-based reporting system, with drill down transaction and volume reporting

Features & Benefits

Cost-Effective Solution - Support any POS systems with a low price point terminal, making your hardware future-proof while also keeping your existing system relevant and EMV compliant at a time when most providers require a new POS investment.

Quicker to Market - Our easy setup allows for a quick and easy integration and works with all operating systems (e.g., Android, Windows, Apple), unlike our competitors that require both additional certifications and coding to .DLL (single integration – meaning no Windows or Apple).

Scalability - Our systems are easy to update or enhance without disrupting your POS system meaning, for example, you can swap terminals without needing to re-certify.

Dedicated Solutions - We accommodate many use-case scenarios, e.g. pay at the table, restaurant or retail with tip, delivery of goods or services, drive through or walk up and pay transactions, front to back office fulfillment with payment collection, and more.

POS Cloud Connect Solution Additional Feature:

Reporting and Detailed Visibility - Real time reporting is available and integrates with your existing systems.
